Call Processing and Voice Mail System

WavMail plays messages over your phone like 'old style' voice mail. Callers can leave a message when you're not available and your telephone message light* lets you know when new messages have arrived.

Your voice mail messages can also be played through a multi-media PC and browser** when WavMail is connected to your office network. Messages can be archived or undeleted, and system options can be changed through the simple browser interface. An Internet connection adds features.

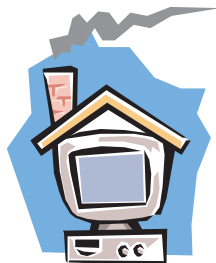

You're never out of
touch with WavMail

✧ You Have Mail! ✧

Your voice mail messages can arrive as attachments in your e-mail. Click on the message to hear it over your PC speakers from home or on the road.

Working from home with broadband? Load our free message checker program at home and an icon will alert you when a new WavMail message has been left at the office. Simply click the icon for instant access to your office WavMail box and play the message over your home PC speakers.

* Available features depend upon your specific telephone system.

** Requires multi-media PC and browser combination with network and/or Internet access to play WAV sound files with WavMail. Most newer PCs have this capability.

No Limits!

- No built-in mailbox limit
(Up to 9,999 with 4-digit mailboxes)
- No built-in limit on browser sessions
(Limited only by the Windows version)
- 2-24 voice ports — same price
(No additional software license fee to add voice ports)

System Features
